# SquEasy advantages

## Current solutions:

Painstaking technique is required to move the sponge float back and forth over rollers to push water out of the sponge often leaving the corners oversaturated and the middle bone dry.

The rollers on competitor washbasins destroy sponge floats quickly and put substantially stress on the wrist, shoulder and back leading to chronic injuries.

To wring out sufficient water from the sponge float, it is often necessary to wring using both hands.

## SquEasy solutions:

Our innovative patent system provides easier and quicker wringing of the sponge for consistent absorption every time.

One handed pressure on the handle is ideal to effect substantially less stress on the wrist, shoulder, and back.

The lifetime for your sponge floats will dramatically increase since only one vertical motion is necessary to wring water from the sponge.
