2.3 Other hazards	
	When the cement-based powder is mixed with water or
	admixture, a strongly alkaline paste is produced. Cement-based
	products may, until set, cause both irritant and allergic contact
	dermatitis. Irritant contact dermatitis is due to a combination of
	the wetness, alkalinity and abrasiveness of the constituent
	materials. Allergic contact dermatitis is caused mainly by the
	sensitivity of the individual's skin to hexavalent chromium salts.
	Corrosive. Prolonged contact causes serious eye and tissue
	damage.
2.4 Additional Information	uunde.
	Contains Ordinary Portland Cement. The product is not expected
	to be hazardous to the environment.
